

Request to register your theses in Tottori University Research Results Repository

● What is a “Repository”?

Repositories are established by universities and other research institutions to accumulate, store, and distribute the research results produced by their members. Users can view and use the research results free of charge.

Currently, more than 1,800 theses are registered in Tottori University Research Repository.

■ Tottori University Research Repository <https://repository.lib.tottori-u.ac.jp/>

● Advantages of registering in the repository !

■ More likely to be found and read

■ Library staff will check for any copyright issues

The repository is linked to many academic literature databases, and its contents are searchable by search engines such as Google. This makes it more likely to be found by a larger reader than if it were posted on a personal blog or on a laboratory website. In addition, copyright issues are checked by library staff, so you can publish your theses with no worries.

● Process to registration

- ① You send the theses to the library.
- ② Library staff checks for copyright issues and tells you the results.
- ③ Your theses are distributed in the repository!

- ※ Theses that have been (or will be) published as books or journal articles may not be made public due to copyright restrictions.
- ※ If you wish to specify a publication date for your theses due to publication or patenting reasons, we can accommodate this. Tell us about it.

Share your
research with
the world
by using the
repository!
